THE Questions contained in this little volume include a reference to almost every essential principle comprised in the work to which they relate; and the student, who shall be able to answer them intelligently, will possess a knowledge of the Latin Grammar at once accurate and extensive.

It is believed, that no valid objection can be made to the use of printed questions, upon such a subject, when judiciously prepared; but that, on the contrary, they may essentially lighten the labor, both of the instructor and his pupils. The student, knowing beforehand the questions which are to be proposed to him, will be able not only to give his answers with more precision, but to comprehend more perfectly the nature and application of the principles contained in his lesson. Should the use of printed questions lead him to adopt in his answers the words of his text-book, this result, so far from being objectionable in respect to the elementary principles of Latin Grammar, is one which every intelligent teacher would greatly desire. Such questions may lessen the labor of the instructor, not by superseding the necessity of a thorough knowledge, on his own part, of the lesson which he is to hear,—for without this no teacher can be accounted a competent one,—but by enabling the student to examine himself, and thus to come to his recitation prepared in a better manner than he could be without their aid. The members of a class, also, can render assistance to each other by alternately asking and answering the questions; and

various means may be easily devised to give interest to such an exercise.

In the Grammar, the comparative importance of the various parts, to one who is commencing the study of the language, is, in some degree, intimated by the size of the type in which it is printed. In this respect, however, much was necessarily left to the judgment of the teacher. For the younger classes, it may be sufficient, at first, to learn only the more important paradigms, and a few of the leading principles of etymology and syntax. Those who commence a little later, can learn not only these, but whatever is contained in the largest type; while those who come to the study of the Latin language with minds well disciplined by other studies, may find it advantageous to include, in their first perusal, all those portions designated in the questions by an asterisk, (*). The parts marked thus, (†) relate to subjects of very different degrees of interest, and such as will claim the student's attention at widely different periods of his education. A few questions, referring to extended lists of words, or to exceptions of little practical importance, will scarcely merit his particular attention at any period.

The Grammar to which these questions refer, abounds in examples of forms and constructions, intended to illustrate the principles in connection with which they are introduced. To have alluded in all cases to these, would have occasioned a constant repetition of the direction, "Give an example;" and it was therefore thought better to omit it altogether, leaving it to be supplied, in each case, by the teacher.
